PROFESSIONAL SUMMARY

Cybersecurity-focused B.E. student in Artificial Intelligence and Machine Learning with an 8.3 CGPI and hands-on experience building Python security CLIs, FastAPI-based scanning platforms, and ML-backed applications. Interested in cybersecurity internships spanning SOC and blue-team operations, Linux, networking, threat detection, and secure software development. Open to internship and fresher opportunities across remote, onsite, and hybrid environments.

EDUCATION

Bachelor of Engineering (B.E.) in Artificial Intelligence and Machine Learning

Bahubali College of Engineering, Shravanabelagola, Karnataka | Expected July 2027 | CGPI: 8.3 / 10

Class XII | 76% | Class X | 76%

EXPERIENCE AND RECOGNITION

- Received internship and job opportunity recognition from Dashin Technosoft, reflecting early industry interest in cybersecurity-oriented development.
- Part of a team that secured 1st place at Hackathon-C3, based on public LinkedIn activity associated with the profile.
- Participated in the International Conference on Intelligent Algorithm for Computational Intelligence System, based on public LinkedIn activity associated with the profile.

TECHNICAL SKILLS

Cybersecurity: Network security, SOC and blue-team fundamentals, Linux security, threat analysis, phishing detection, malware basics, supply-chain scanning

Programming and AI/ML: Python, JavaScript, HTML/CSS, React, FastAPI, TensorFlow/Keras, machine learning, AI automation

Tools and Platforms: Git, GitHub, Kali Linux, Linux, Docker, SQLite, Oracle Cloud, VS Code, Google Play Console

SELECTED PROJECTS

FastSec / CipherShield Cyber Scanner | Python, FastAPI, JavaScript, HTML/CSS, SQLite, SSL/TLS

- Built a full-stack cybersecurity scanner for SSL/TLS certificate inspection and domain intelligence with FastAPI backend services and browser-based frontend flows.
- Implemented JWT authentication, scan history, watchlist monitoring, WHOIS and DNS lookups, and alert-oriented workflows for practical security analysis.

Safe Security Scanner | Python, CLI, SBOM, pip-audit, supply-chain security

- Developed a Python CLI to analyze local repositories, Git URLs, PyPI packages, and SBOMs for risky code patterns, hard-coded secrets, and dependency issues.
- Added JSON reporting and Kali-friendly execution paths to support first-pass software supply-chain risk triage in developer and security workflows.

Exploit Verifier | Python, Docker, CVE validation, defensive security

- Created a defensive exposure-verification CLI that checks public CVE indicators using Docker-isolated benign probes and evidence-based confidence scoring.
- Designed the tool for authorized validation without weaponized payload execution, making it useful for blue-team triage, lab validation, and documentation workflows.

Blood Group Prediction | Flask, TensorFlow/Keras, OpenCV, HTML

- Built an end-to-end ML-backed web application that predicts one of eight labels from uploaded fingerprint images using a trained CNN model.
- Connected model inference to a browser workflow with image upload, prediction, and confidence display to demonstrate applied AIML deployment.

CERTIFICATIONS

Google Foundation of Cybersecurity; Google Play It Safe: Manage Security Risks; Google Tools of the Trade: Linux and SQL; Google Connect and Protect: Networks and Network Security; Cisco Introduction to Cybersecurity

ADDITIONAL INFORMATION

- Languages: Kannada, English, Hindi.
- Target roles: Cybersecurity Internship, SOC / Blue Team, Software plus Security.
- Work preference: Internship or full-time fresher opportunities across remote, onsite, and hybrid environments.
